IMPROVEMENTS MADE FROM PROFESSOR'S FEEDBACK

IMPLEMENTATION OF WORKING API

We have implemented working API which was one of the major feedback received during last presentation

IMPROVEMENT OF TESTING SYSTEMS

We have made correction to the way we design the tests for changes that we are making. Now tests are corresponding to the code we are improving

StressOut

PROJECT DESCRIPTION

We are developing depression detection system that uses artificial intelligence model to analyze person's face with images or current mood with text, to help find depression sings. Our detection system is trained with a unique dataset depression faces from messages and images. We believe that certain linguistic traits can be examined and linked to possible depressive symptoms as well as used to forecast self-destructive behavior. The training result we want to achieve is the system capable of analyzing the input (messages and images) from users, and detect the type of depression such as anxiety, bipolar or paranoia.

StressOut

PROBLEM STATEMENT

Depression is a prevalent mental health disorder that affects millions of people worldwide. The condition is characterized by a persistent feeling of sadness, hopelessness, and loss of interest in daily activities. It significantly impairs a person's ability to function and can lead to a range of physical and emotional problems. Early detection of depression is crucial for effective treatment, as it can reduce the severity and duration of symptoms and improve a person's quality of life.

However, traditional methods of detecting depression, such as self-report questionnaires or clinical interviews, have several limitations. Self-report questionnaires rely on a person's ability to accurately report their symptoms, which can be influenced by various factors, such as social desirability bias, memory recall bias, and language barriers. Clinical interviews can also be subjective and may vary depending on the clinician's experience and training.

As a result, there is a need for an objective and reliable method of detecting depression. One potential solution is the use of machine learning algorithms to analyze various data sources, such as speech patterns, facial expressions, and physiological signals, to identify indicators of depression. These systems have shown promising results in early studies and have the potential to revolutionize the field of mental health.

Detecting depression early is essential, as the condition can lead to a range of negative outcomes, including increased risk of premature death, suicidal thoughts, and impaired daily functioning. By developing accurate and reliable detection systems, we can improve the lives of millions of people who suffer from depression worldwide.

TEAMWORK AGREEMENT

StressOut

Team Agreement

Communication

- The team will communicate with each other through a variety of channels. For weekly meetings for meaningful team discussions, zoom meetings will be used. All the team members are highly encouraged to keep their cameras on, which will be able to build trust between the team members and reflect transparency.
- To discussion regarding minute details and doubts or anything urgent, a Whatsapp messenger group will be used.
- To share the final deliverables, Google docs will be used where all the team members can edit the document.
- A common platform called Trello has been set up for all team members, where designated groups have been created, such as Developers, Business Analyst, Product Owner.
- Database management, bugs, attendance, weekly -plan, and meeting minutes. This manages all the bits and pieces of the project and makes the project management efficient.

Work division and Participation

- The entire project work should be divided into equal parts, and equal responsibilities should be given to all the team members.
- Each team member should complete their division of work before the deadline. If they are unable to complete the work on time, that hinders the performance of the entire team. If in case a team member is facing trouble and issues at some point, they can share it with others so that they can help each other and complete the work before the deadline.
- All the team members are expected to attend the meetings promptly.
- Absence during multiple meetings will affect the team's performance and efficiency. The team member can discuss beforehand with the team leader if he/she is going to miss the meeting or make it up for it before the next meeting is scheduled.
- Work is separated between members of the group separated voluntary, however if members lacks participation product owner is entitled to assign necessary tasks to absentee members.
- In case member is absent during meetings, member pledges to support whichever decision is approved during that meeting.

Meetings

- All the team members will meet on zoom virtually every Tuesday and Friday. All the team members have to be present, as attendance is mandatory unless there is an exceptional case.
- The team leader would be responsible for sending meeting details and conducting the meeting.
- A meeting track or meeting minutes report would be listed after every meeting to keep track of the project and its progress.
- Every team member is expected to come u with ideas, participate in the discussion, and give an update on their progress for their part of the work.

Respect

• Making sure all team members always have chance to share their opinion

• All members agree to respect each others personal time and try not bother members during night time unless it is urgently required by the project.

PERSONAS

JACK

Profile

Jack, a 35-year-old software engineer who has a history of depression and anxiety. He often finds himself feeling overwhelmed at work and is struggling to balance his job and personal life. He wants to find a way to manage his symptoms so that he can be more productive and happier.

Name: Jack
Age: 35
Location: Chicago, MI
Job: Software Engineer
Salary: 92 000 – 110 000$/annually
Family: Single

Interests

- Riding Bike
- Goes Kayaking
- Attending live concerts

Frustration

- Managing depression
- Wants to change job, but unable

Goals

- Moving to south
- Finding friends
- Buying a bigger house

StressOut

PERSONAS

SARAH

Profile

Sarah, a 25-year-old graphic designer who has been feeling down for the past few months. Despite her successful career and supportive friends and family, she feels unfulfilled and struggles to find joy in her everyday life. She wants to find a way to manage her depression and is open to using technology to help her do so.

Name: Sarah
Age: 25
Location: Los Angeles, CA
Job: Graphic Designer
Salary: 66 000 – 70 000$/annually
Family: Single

Interests

- Writing own comic books
- Everyday swimmer
- Loves animals
- Watching series

Frustration

- Traffic in Los Angeles area
- Living alone for a long time

Goals

- Buying her own house
- Building lifelong relationships
- Finding friends

StressOut

PERSONAS

LISA

Profile

Lisa, a 40-year-old stay-at-home mom who is feeling overwhelmed and exhausted. She is struggling to keep up with the demands of taking care of her children and household, and she often feels like she is failing as a mother. She wants to find a way to manage her stress and feelings of inadequacy.

Name: Lisa
Age: 40
Location New-York, NY
Job: Unemployed
Salary: N/A
Family: Married, two kids

Interests

- Reading romantic novels
- Going for beach holidays
- Loves animals
- Watching series

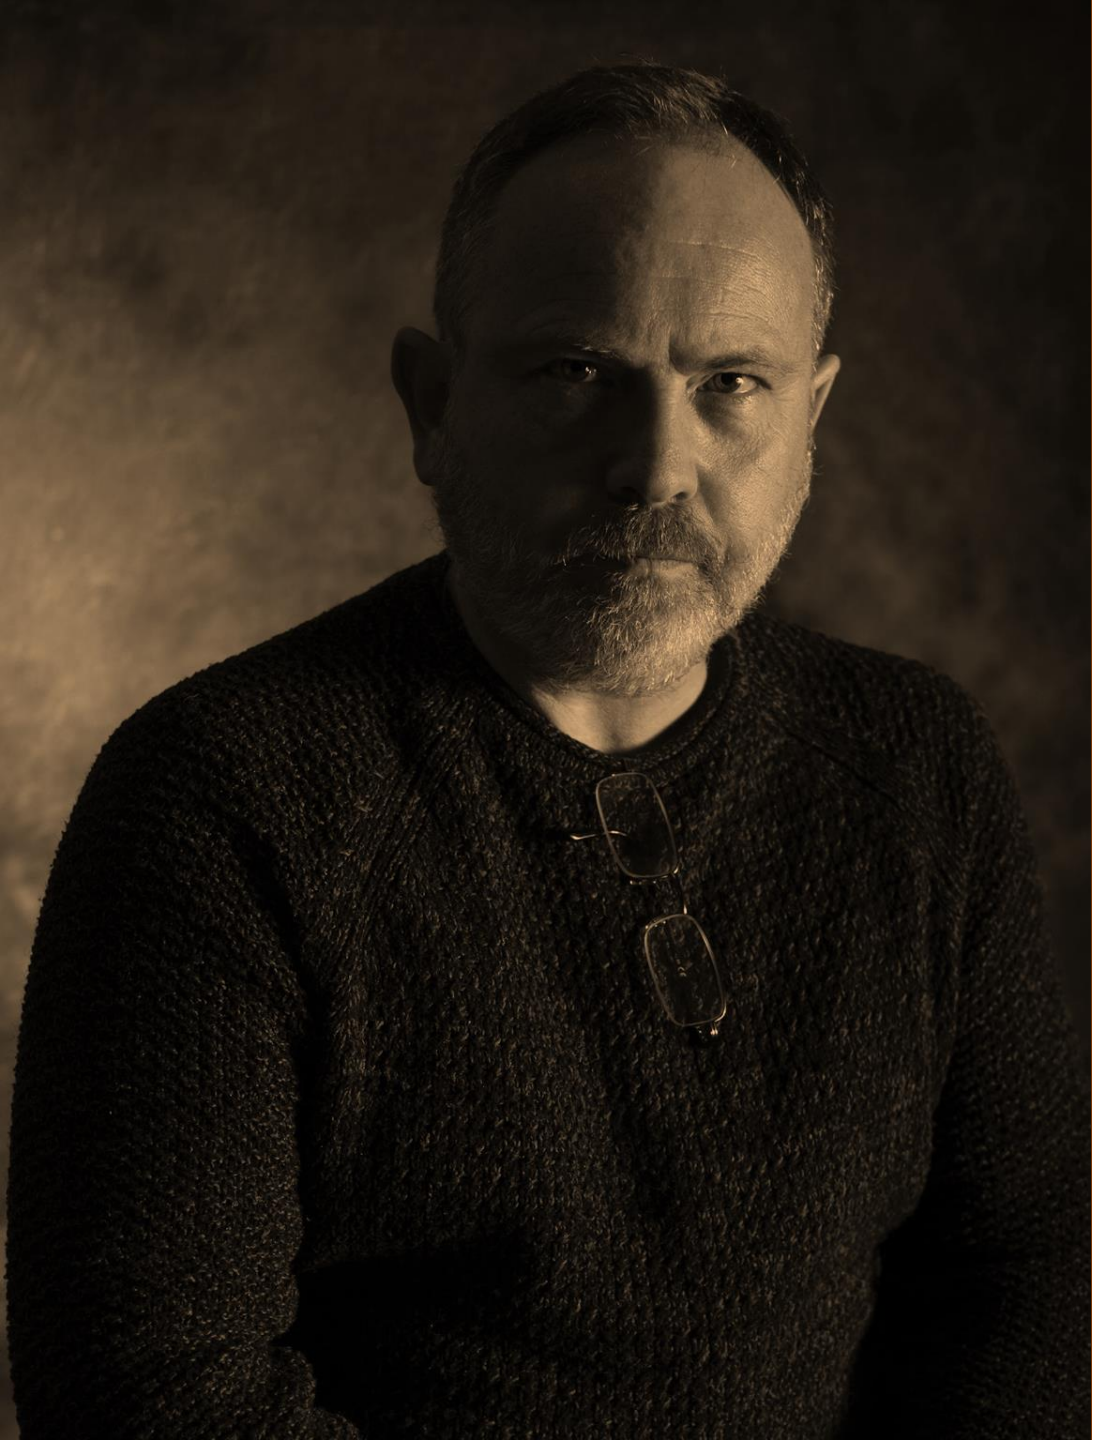
Frustration

- Her husband going for a long business trip
- Having troubles with her kids

Goals

- Taking dog from shelter
- Helping kids with college

StressOut



PERSONAS

TOM

Profile

Tom, a 50-year-old small business owner who is feeling stressed and burnt out. Despite the success of his business, he is feeling overwhelmed by the responsibilities and pressure of running it. He wants to find a way to manage his stress and anxiety so that he can enjoy his success and have a better work-life balance.

Name: Tom
Age: 50
Location: Austin, TA
Job: Self-Employed
Salary: 150 000 $/annually
Family: Divorced

Interests

- Going hunting & fishing
- Taking rides in his chopper

Frustration

- Declining business profits
- Having health problems

Goals

- Building strong portfolio for his 401-k
- Finding new friends

MVP, TECHNOLOGIES & ALGORITHMS

MINIMAL VIABLE PRODUCT

Home Page

- A welcome message that briefly introduces the app and its purpose
- A button or link to create an account or log in if you already have one
- A list of features and resources available within the app, such as self-assessment questionnaires, mood trackers, and mental health resources
- A prominent call-to-action encouraging users to take a self-assessment or start tracking their mood

Profile/History of Consultation

- A section where you can edit your personal information, such as your name, email address, and password

StressOut

MINIMAL VIABLE PRODUCT

Image upload/Take Picture

- A camera button that allows you to take a picture directly within the app
- A gallery button that allows you to upload pictures from your camera roll
- An option to add captions or notes to each image, to help you remember important details or context

Recommendation

- A dashboard that displays any recommendations or next steps based on your self-assessment results, including suggestions for lifestyle changes, self-care practices, or professional treatment options

SPRINT 5 RECAP

Issue type	Key	Name
STRES-36	task	Implemented a functionality to the app that permits users to upload images.
STRES-39	story	As a user, I would like the ability to upload images to save them and assess my depression levels.
STRES-48	story	As a user, I want guidance on the ways to prevent my depression from worsening.
STRES-50	task	Connected App with firebase Storage where the raw images uploaded by the users were stored.

SPRINT 5 RECAP

StressOut

User Stories		
Key	Summary	Place
STRES-19	As a user, I want to register myself to the application. So that I can keep my account private and login using email/phone and password.	Home Page
STRES-20	As a user, I want to login in app. So that I can use it to store all my information.	Home Page
STRES-42	As a user, I want to upload my picture from phone gallery to analyze so that get more accurate information.	Image Upload/Take Picture
STRES-22	As a user, I want to take a picture from my front and back camera to upload so that the app can analyze	Image Upload/Take Picture
STRES-23	As a user, I want to view my upload history and their results	Profile/History of consultation
STRES-24	As a signed in user, I want to log out So that I can have my privacy in the app.	Logout/Login
STRES-25	As a user I want to be able to find contacts for professional help	Recommendation
STRES-26	As a user I want to be able to view history of my recommendation	Recommendation
STRES-27	As a user, I want to create my profile So that I can store my account information.	Profile/History of consultation
STRES-28	As a user, I want to be able to edit my information detail	Profile/History of consultation
STRES-29	As a user I want to be able to add captions for pictures I have uploaded	Image Upload/Take Picture
STRES-30	As a user, I want to be able to view personalized tips and strategies for managing symptoms	Recommendation
STRES-31	As a user, I want to know the sign of depression, and the risk of depression	Recommendation
STRES-48	As a user, I want to link to the hospital so that I can make a appointment with doctor	Recommendation
STRES-52	As a user, I want the app to keep checking my depression level so that I know when my depression level is worse	Profile/History of consultation
STRES-34	As a user, I want to know the risk of depression about me after I take pictures	Image Upload/Take Picture
STRES-35	As a user, I want to know some tips for relieving depression so that I can become better	Recommendation

APP SCREENSHOTS

StressOut

USER DETAILS

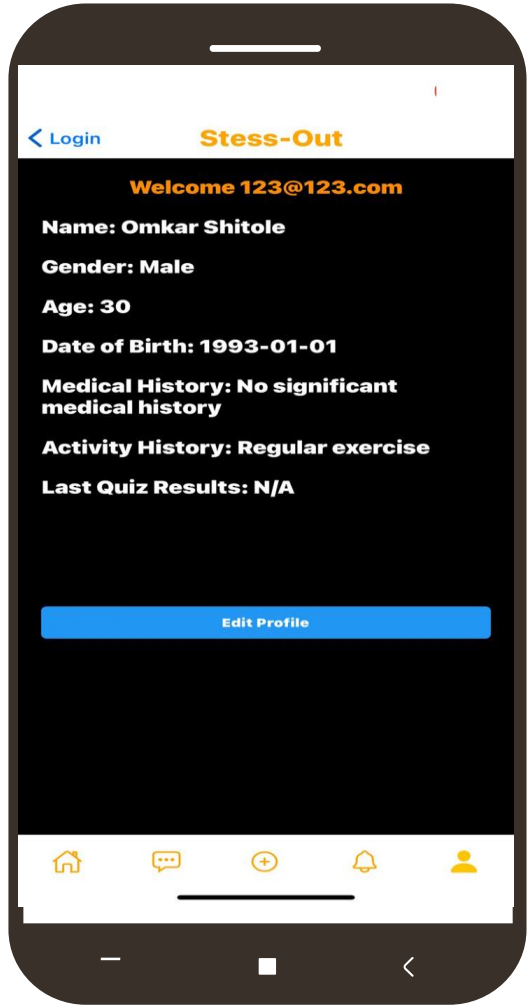
Profile Screen

In this screen user can edit and save profiles information like name, gender, age, DOB, medical history, and activity history.

User quiz results are saved in real-time to a Firestore database as part of their profile data.

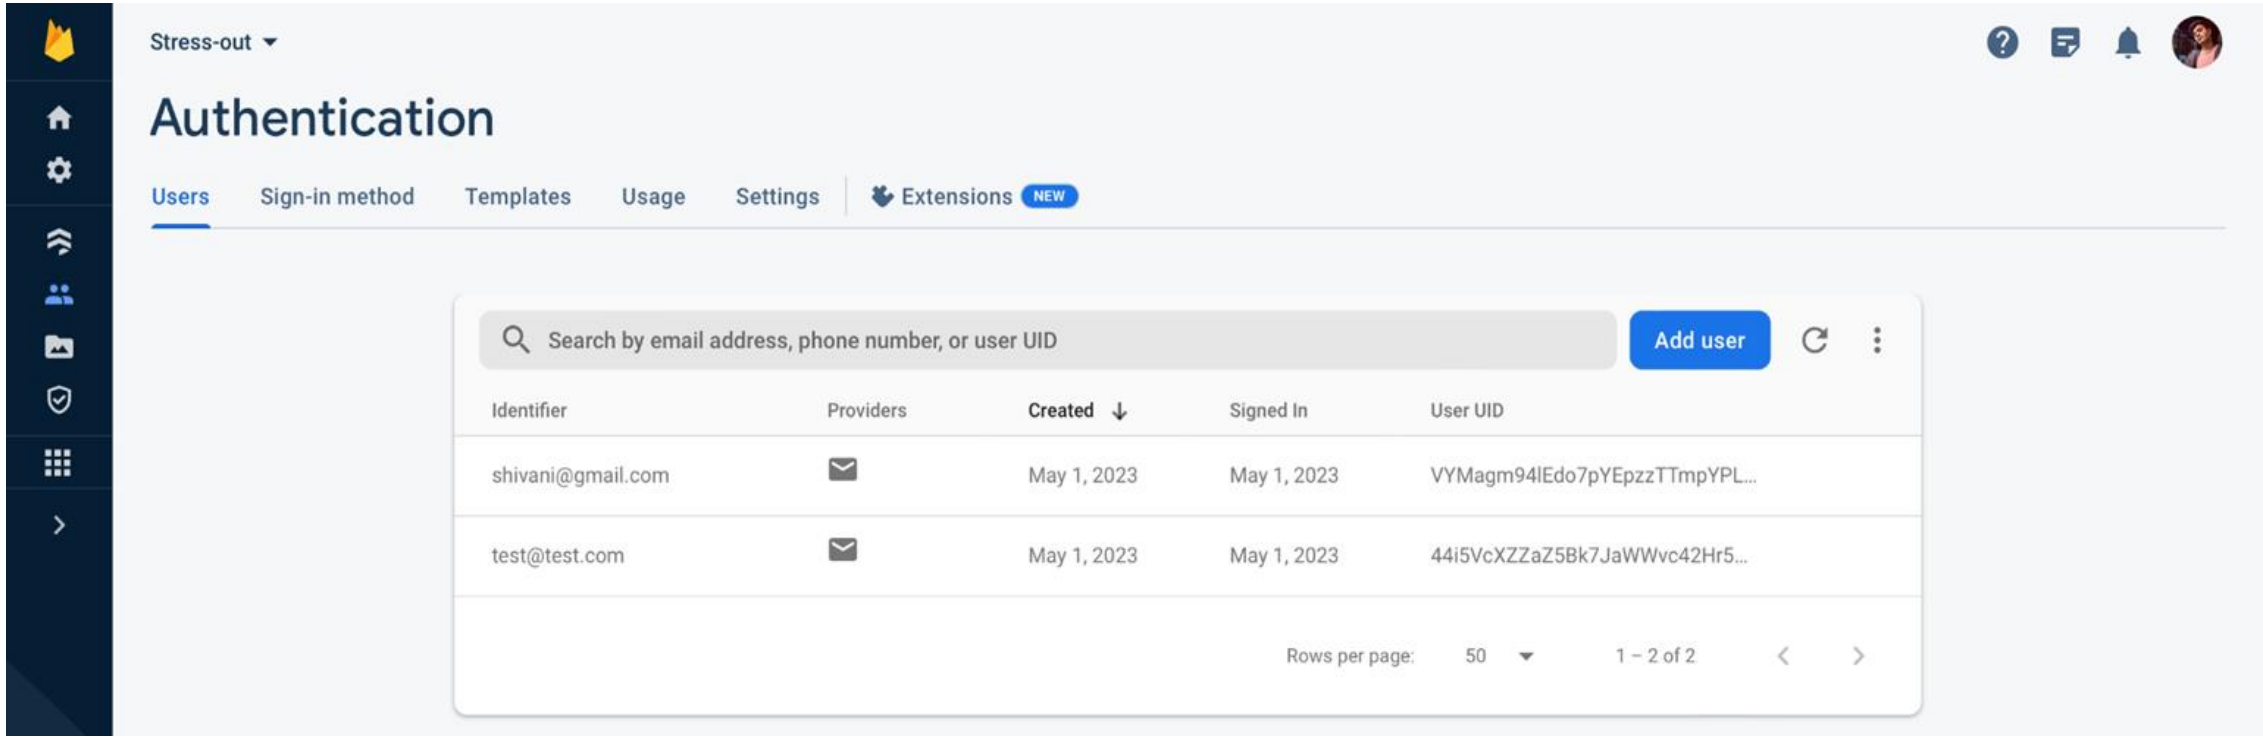
The app's profile screen provides a comprehensive overview of the user's personal information and quiz results, aiding in stress assessment.

By combining facial recognition technology and profile data storage, the app aims to offer effective stress detection and management.



StressOut

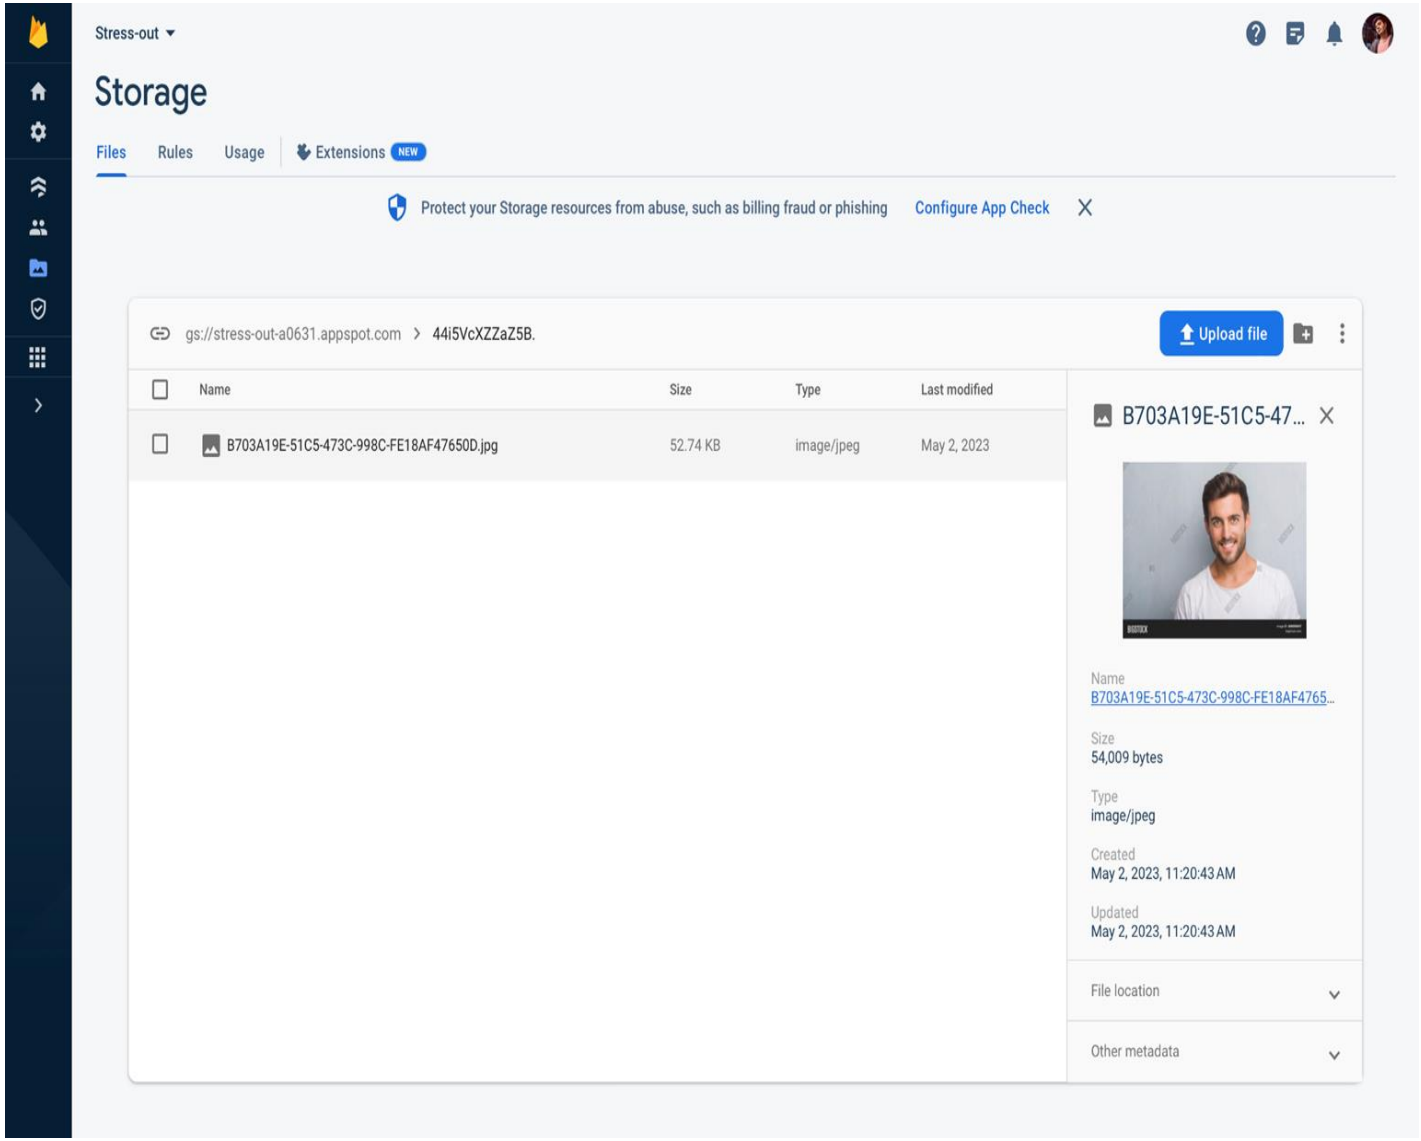
FIREBASE AUTHENTICATION



When a new user creates an account using Firebase Authentication in our app, the user's email address and a unique user ID (UID) are automatically generated and stored securely in the Firebase Authentication server.

StressOut

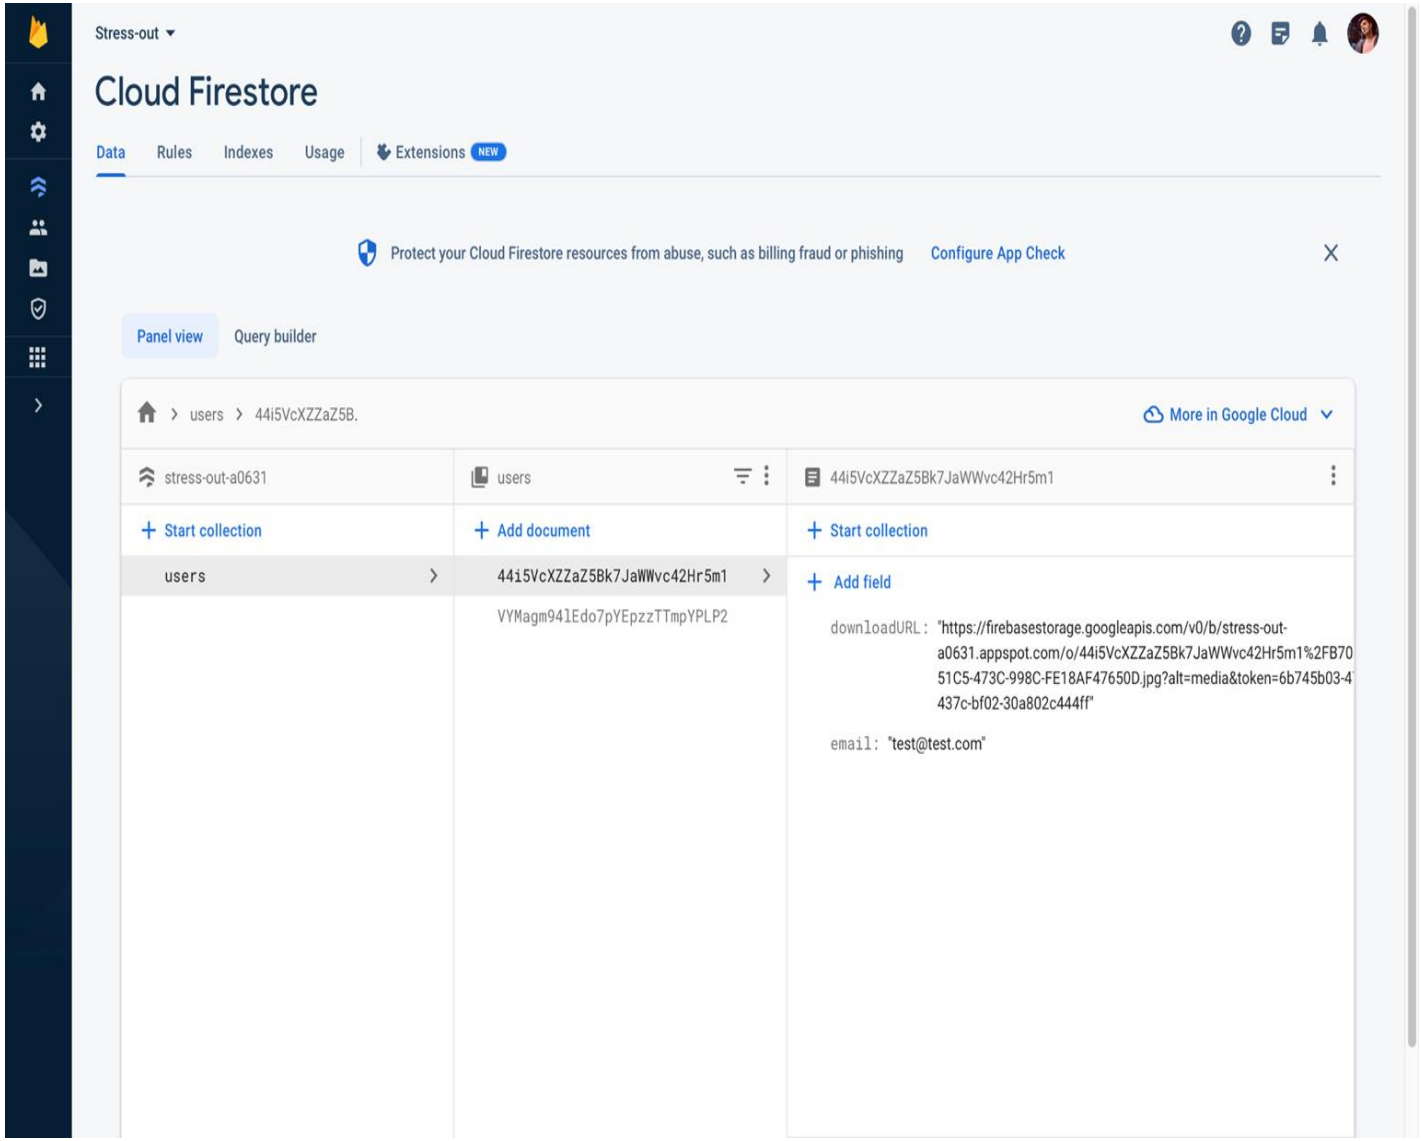
FIREBASE AUTHENTICATION



When a user uploads or takes a picture in our app, the image is stored in Firebase Storage using the Firebase Storage client SDK. To maintain a separation between different users' data, we create a separate folder for each user in Firebase Storage, with the user's UID associated with that folder. This ensures that each user's data is stored in separate location. Firebase Storage generates a unique URL for each file that is stored, which can be used to retrieve the file later.

StressOut

FIREBASE AUTHENTICATION



When a user signs up for the app, we create a new document for the user in the in the collection called users in firestore database using the Firebase Authentication UID as the document ID.

The image which is uploaded to a Cloud Storage bucket under a unique file name that includes the user's UID and the current timestamp. The getDownloadURL method is used to obtain a download URL for the uploaded file. Finally, the user's document in Firestore is updated with the URL of the uploaded image.

StressOut

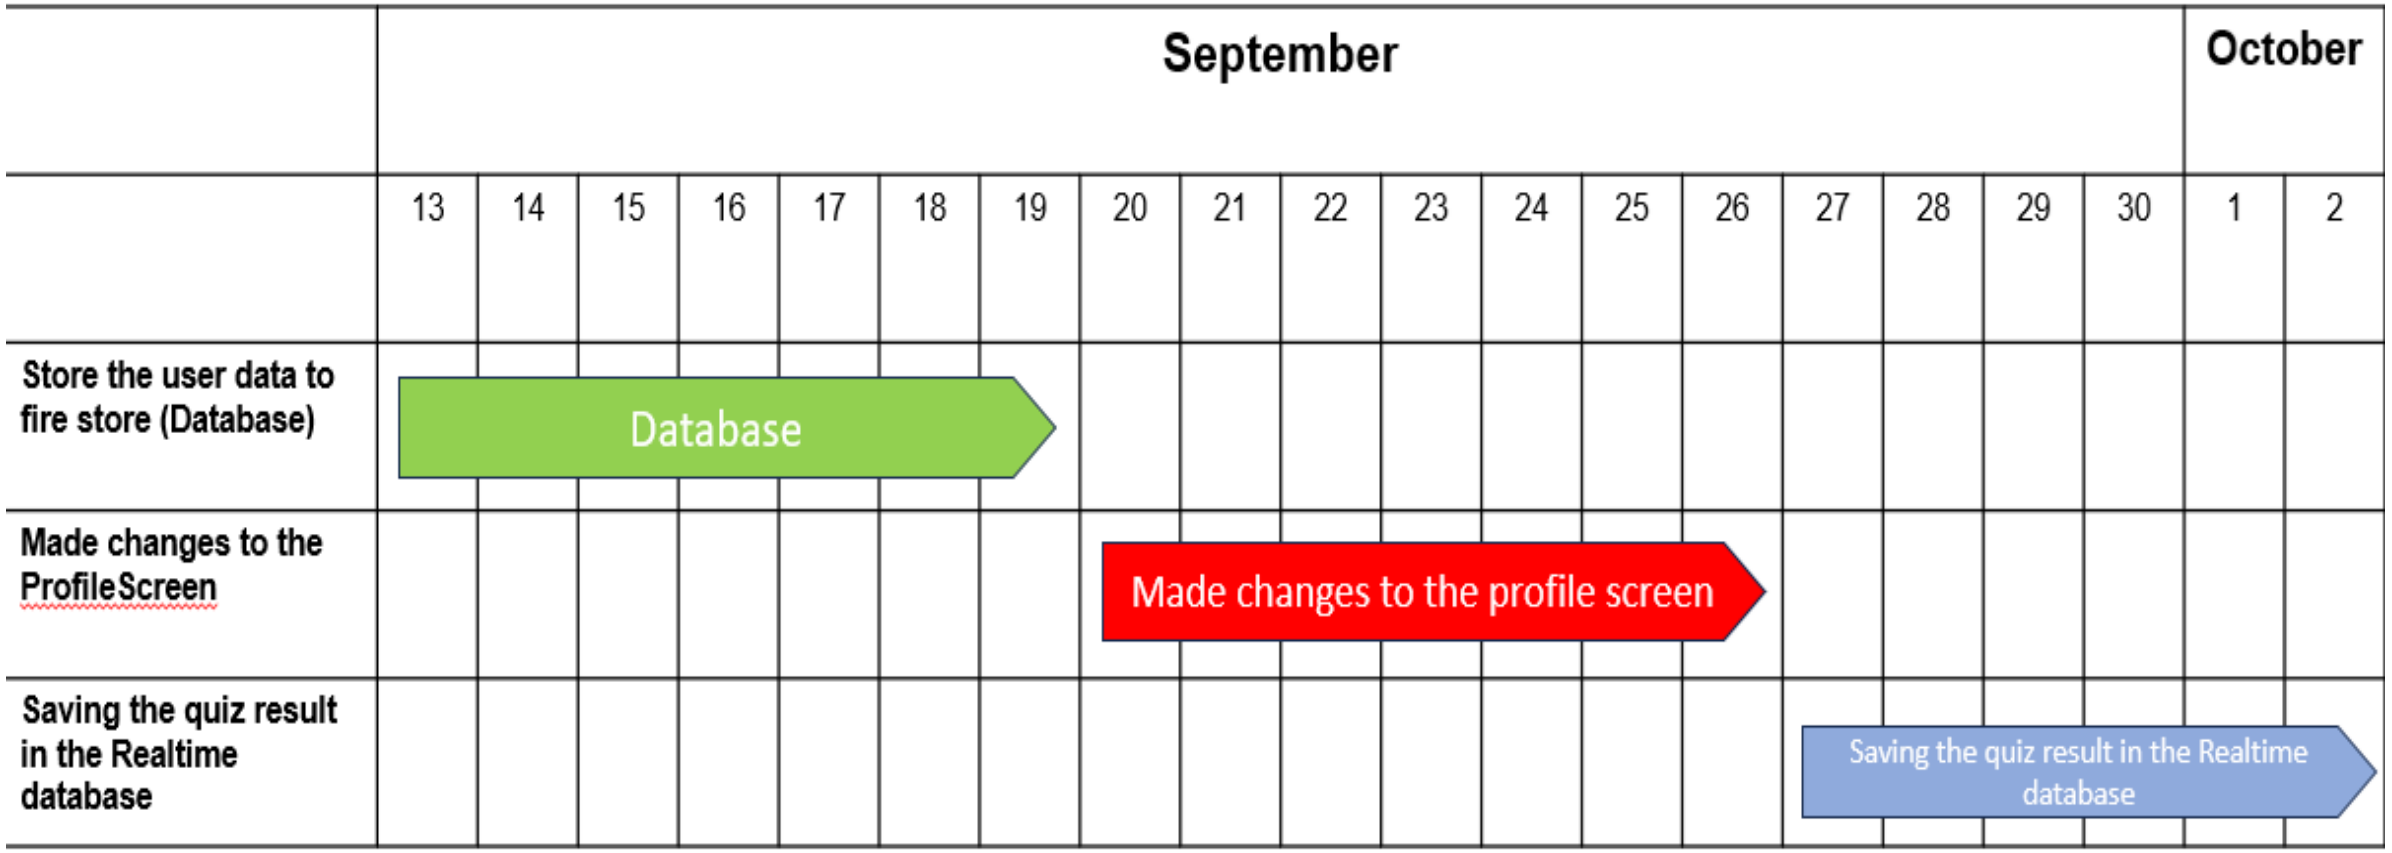
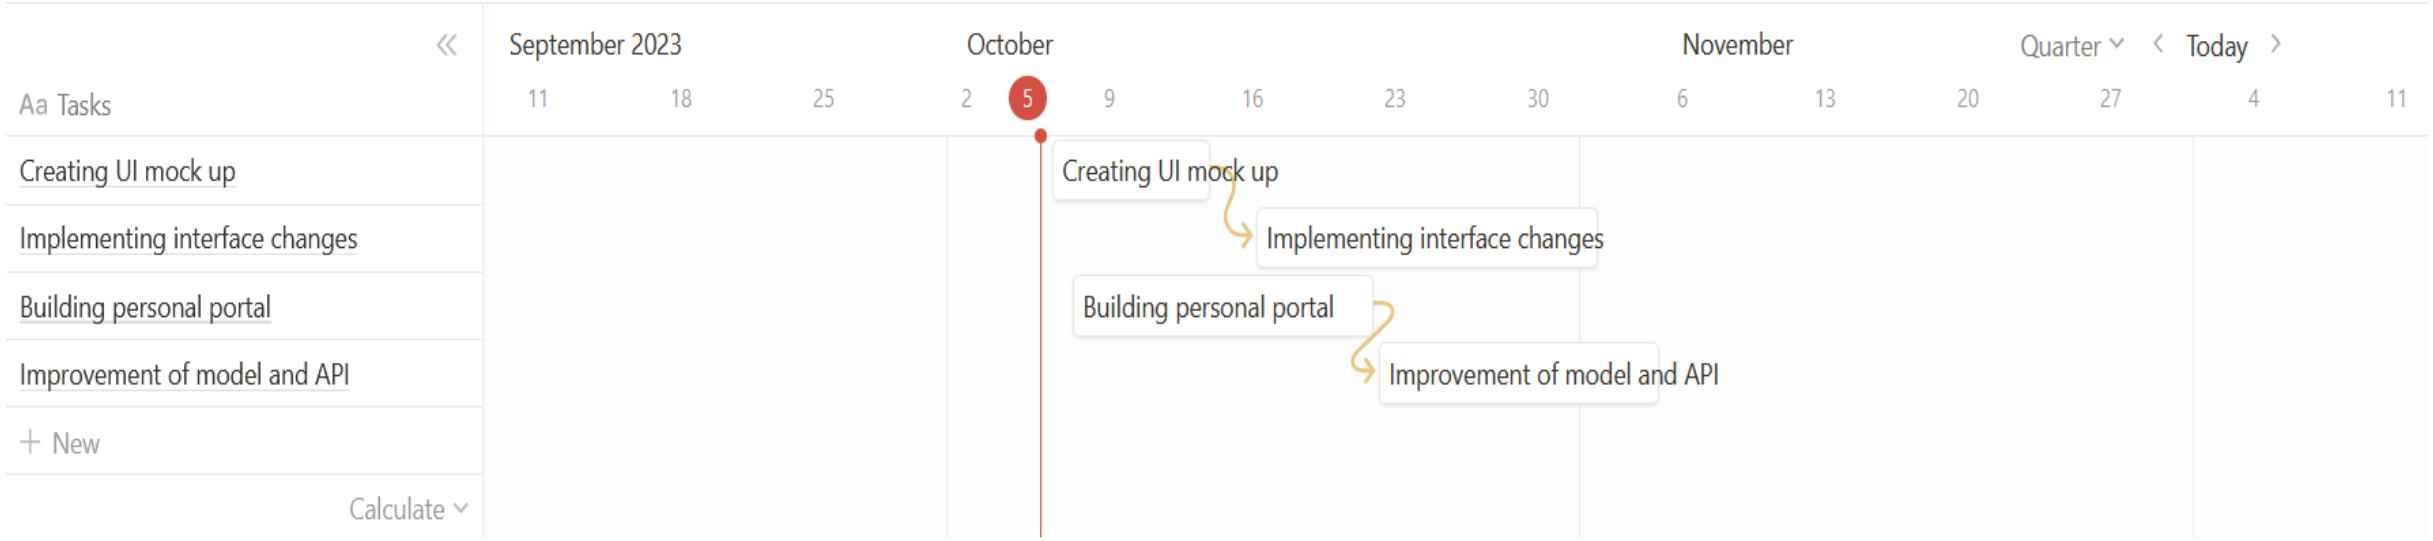
SPRINT 5 SCHEDULE



StressOut

SPRINT 6 SCHEDULE



RETROSPECTIVE

What went well: Team collaborated effectively with each other. Despite short sprint team managed to find solution for API issues we have had with our application. All changes were introduced in timely manner allowing team members to cross check each other's work

What needs improvement: We need to investigate cutting number of slides and reducing the length of presentation. Currently we have over 48 slides which makes presentation lengthy and difficult to render and upload to wiki.

Next Steps: We are going to change the front-end side of the application to improve UI and user perception,
